

Emergency Nurse Pediatric Course

Associated Industries: Health Science

Description and Labor Market Information

The Emergency Nurse Pediatric Course (ENPC) course is a specialized course taught by qualified emergency nurses, and is designed to provide the core-level pediatric knowledge and psychomotor skills needed to properly assess and implement evidence-based interventions in emergency medical settings. Participants in this course must already be registered RNs, though LPNs and paramedics are eligible to attend for contact hours but not sit for the exam.

This credential was associated with 5 occupations that were identified as well-paying and in demand. Overall, those occupations represent 15,904 positions with 1,092 annual openings within the state and median hourly earnings of \$43.01.

Sample Occupations

Registered Nurses

Median Hourly Earnings: \$50.62
 Typical Entry Level Education Requirement: Bachelor's degree
 Total Positions: 12,531
 Annual Job Openings: 835

Licensed Practical and Licensed Vocational Nurses

Median Hourly Earnings: \$23.73
 Typical Entry Level Education Requirement: Postsecondary nondegree award
 Total Positions: 1,443
 Annual Job Openings: 135

Emergency Medical Technicians and Paramedics

Median Hourly Earnings: \$26.19
 Typical Entry Level Education Requirement: Postsecondary nondegree award
 Total Positions: 834
 Annual Job Openings: 68

Local Availability:

Multiple. For resource on available courses please see certifiers website.

Exam Details

Age Requirement: N/A

Coursework/Hours to Complete:

2-day course

Length of Certification Validity: N/A

Exam Cost: Varies

Exam Time: N/A

Number of Questions: N/A

Pass Rate: N/A

PROMISING CREDENTIALS IN HAWAII

This project has been a joint effort between Kamehameha Schools, the Chamber of Commerce Hawaii, University of Hawaii P-20, and the Harold K.L. Castle Foundation.

Students in Hawaii can earn hundreds of industry-recognized credentials right now. Thousands of students are investing time and resources to achieve these credentials with the hope they will lead to a career that enables them to live and thrive in Hawaii. But how effective are these programs at preparing Hawaii students for future careers and long-term success?

Promising Credentials in Hawaii, a first-of-its-kind analysis for our state, looks at whether the credentials students can earn actually matter in the real world to local employers.

Through intensive labor market analysis and outreach to local Hawaii businesses, this project has identified **137 Promising Credentials** that are associated with in-demand, living wage occupations throughout the state. The process began with identifying **274 Promising Occupations** that met wage and demand thresholds. A list of corresponding credentials for the 274 occupations was then compiled using job postings data. Finally, Hawaii employers from across the state completed surveys and participated in focus groups to narrow the list of nearly 2,000 credentials down to the 137 credentials they say matter most when making hiring and promotion decisions.

The resulting Promising Credentials were identified as relevant in hiring and promotional decisions for multiple in demand and well-paying occupations within the state. A detailed one-page summary of each of these Promising Credentials has been organized for student, school, and community use.

The comprehensive report and associated data can be found at www.HawaiiCareerPathways.org.
